

This document refers to a box of technical reports in the Computer History Museum's collection, described under catalog number 102737737.

The following technical reports in this box have accompanying descriptions:

TCP/IP PrintServer : server architecture and implementation

"The TCP/IP PrintServer is a printer that uses Internet protocols to communicate with its clients. This document describes the internal operation and implementation of the printer-resident software."

Attribute caches by Kathy J. Richardson and Michael J. Flynn

"This paper develops an attribute scheme to improve total I/O cache performance. The scheme relies on workload characteristics to determine the appropriate cache configuration for a given cache size."

Operating systems support for busy Internet servers by Jeffrey C. Mogul

"This paper covers some of the issues that arise when trying to operate a high-volume IIS system."
